Red Sentinel

The ultimate AI Security platform

redsentinel.xyz

AI Risk Landscape

RedSentinel

- AI is showing up everywhere
- Most companies rely on AI from outside sources
- What happens when your AI is attacked ?
- AI security isn't built into company playbooks yet

AI Systems derive their power from

- Model Intelligence
- Access to sensitive Data(API, database, filesystem, etc)
- Autonomous decision making

That same combination makes them a critical attack surface

The Gap

RedSentinel

- Traditional Red Teaming Works. But It Doesn't Scale.
- Current solutions (Lakera, Mindguard, Prompt Security) offer red teaming as a managed service. expensive, slow, and limited to who they can hire.
- There is no marketplace. No continuous stress-testing. No way for a company to know in real time how resilient their AI system actually is.

Our Solution

RedSentinel

Red Sentinel: Crowdsourced AI Red Teaming

- Companies deploy their AI systems as **Sentinels**. setting a bounty pool and fee per attack. A global community of red teamers competes to break them.
- Every attack is verified inside a **Trusted Execution Environment** using cryptographic attestations. Successful attacks trigger **instant, trustless on-chain payouts**.

No disputes. No delays. No trust required.

How It Works

Defenders

1. Set up their AI system, define public/private instructions.
2. fund a reward pool.
3. receive a full attack dataset + resilience score as an audit report.

Attackers

1. Pay a small per-message fee to attempt jailbreaks, data extraction, and adversarial attacks.
2. Break the Sentinel, earn the bounty.

Protocol

A DSPY-powered jury model evaluates each attack. Results are cryptographically attested and settled on-chain automatically..

The Economics

Each message fee splits three ways

Failed attacks grow the bounty, attracting more attackers

The Economics

The longer a Sentinel holds, the bigger the prize. This creates a self-reinforcing flywheel. more attackers, more data, better defenses.

Defenders also earn **continuous Sentinel token rewards** proportional to their pool size, incentivizing early liquidity.

RedSentinel

Why Sui ?

01

Verified authenticity

cryptographic proof that an attack genuinely happened, neither party can dispute

02

Trustless Settlement

No intermediary needed to release funds

03

Transparent Incentives

Token rewards, pool mechanics, and fee splits are all on-chain and auditable.

A centralized platform cannot offer this credibly.

RedSentinel

Available Market

The AI security market is projected to reach **$60B+ by 2028**, driven by enterprise AI adoption and regulation.

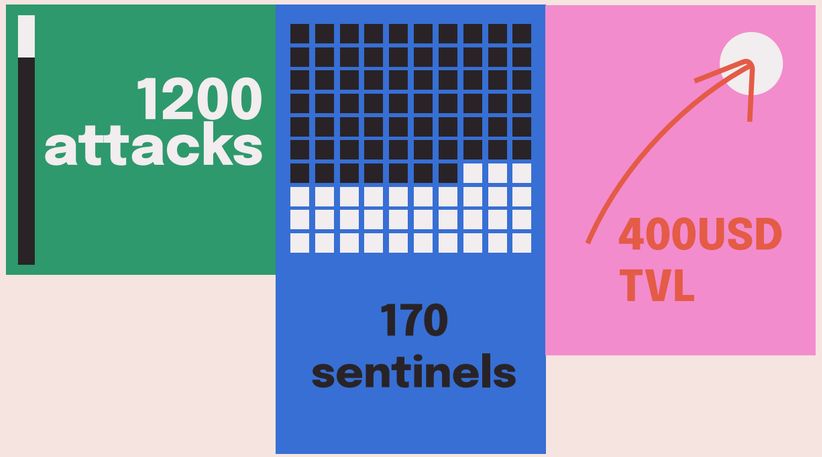

Our Web2 competitors are service businesses with linear scaling. We are a platform, it scales with participants, not headcount.

Target segments: AI-native startups, enterprise GenAI deployments, LLM API providers, and any company using AI agents with access to sensitive data.

RedSentinel

OUR JOURNEY

June 2025	Won Sui Overflow Cryptography track prize
Oct 2025	Presented at Sui Fest Singapore
Jan 2026	Contract audit completed by Ottersec team
Feb2026	Live On Sui Mainnet
May2026	Live On Solana Mainnet

Building in stealth for months. prioritizing product quality over early noise

RedSentinel

We are looking for investors and advisors who see AI security as the next critical infrastructure layer. and want in early.

RedSentinel

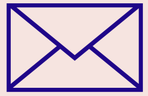

OUR MISSION

To make AI security a public good accessible, verifiable, and powered by the crowd.

OUR VISION

To crowdsource AI red teaming at scale and help build safer systems.

Thank you. We would love to connect with you. Any feedback is appreciated.
